

LogVue delivers security advanced log management and intelligent security search in a simple solution that is easy to install and deploy

LogVue® from EiQ Networks provides the ability to collect and manage event logs from a wide range of network devices such as routers, switches and firewalls, along with Windows and Linux workstations and servers. The solution is easy to setup and configure, and allows unlimited log file retention for up to 25 devices for free. Logs are optionally encrypted and compressed for secure, efficient storage. In addition, LogVue includes forensic search features that enable an organization to search data generated from across the IT infrastructure in a single console.

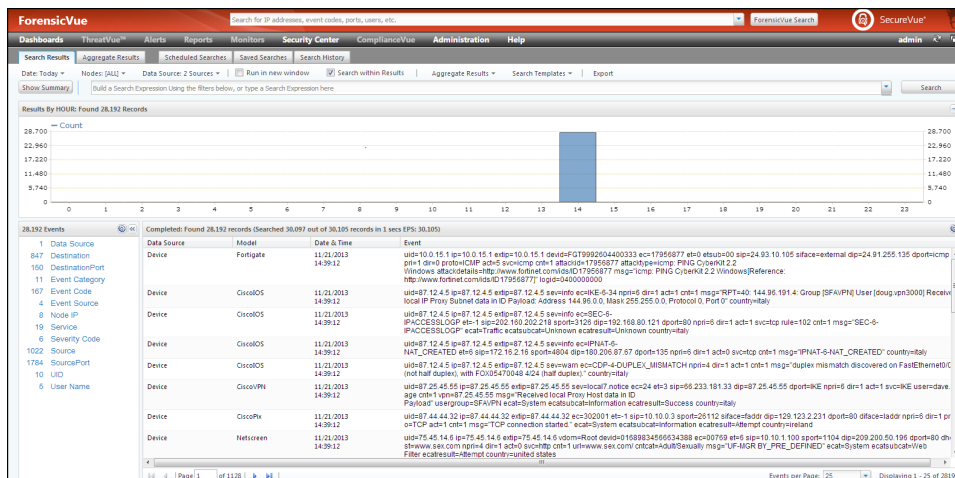

Log management has become critical to maintaining a secure network and complying with industry regulations. LogVue can improve an organization's security awareness by collecting event data from a wide range of sources. The solution assists with compliance by securing and archiving log files as mandated by a number of security regulations. Lastly, the forensic search tool facilitates quick investigations into security incidents and policy violations, so that the root cause can be identified and remediated.

Continuous Security Intelligence™

Key Benefits

- Collect and archive logs with a solution that is easy to deploy and maintain
- Manage event logs from a broad array of devices from a single, centralized console
- Implement log retention policies that meet security best practices and the requirements of PCI, HIPAA & other compliance frameworks
- Investigate and respond to security incidents with the industry's best performing forensic search tool
- LogVue is part of the EiQ SecureVue® platform, a modular solution that scales with your information security intelligence needs

Key Functions

Log Management

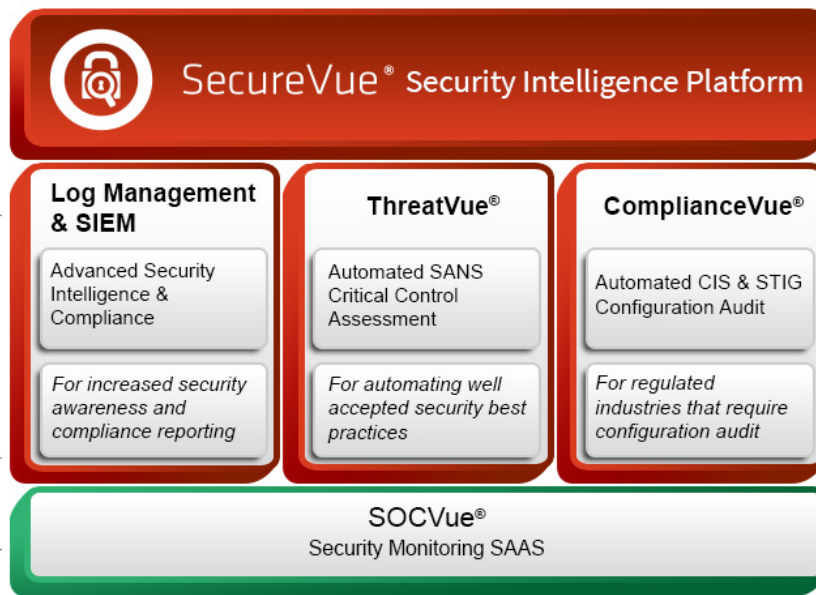

- Collect Syslog and Windows events from network devices, workstations and servers
- Built-in support for a broad array of routers, switches, firewalls, Windows and Linux hosts, web servers, and security applications
- World-class encryption and advanced compression for secure and efficient long-term log data retention

Intelligent Security Search

- Quickly respond to security incidents and policy violations by searching across a wide spectrum of network devices and systems
- Maintain unparalleled speed when searching across days, weeks, months and even years' worth of data

SecureVue Platform

SecureVue is a modular security intelligence solution that can be expanded as organizations face additional security or regulatory requirements. Take your security to the next level with these additional SecureVue components:

The LogVue configuration for SecureVue is free-of-charge for up to 25 nodes. The following free configurations are also available now:

- FIMVue™ - File Integrity Monitoring
- USBVue™ - USB Device Monitoring
- DiscoveryVue™ - Asset Discovery & Management
- FlowVue™ - Network Traffic Analyzer
- VulnerabilityVue™ - Vulnerability Management
- PerformanceVue™ - Network Performance Monitoring
- EventVue™ - Network Event Monitoring

About EiQ Networks

EiQ Networks, a pioneer in simplified information security and compliance solutions and services, is transforming how organizations meet their security monitoring and compliance objectives. With SecureVue®, a continuous security intelligence platform, organizations can gain comprehensive security monitoring, critical security control assessment, configuration auditing, and compliance automation. For resource constrained organizations EiQ provides SOCVue, a continuous security monitoring software as a service (SaaS) offering.
