

## SecureVue improves information security via effective security control monitoring

Security conscious organizations around the world face major challenges to deliver effective staff, processes, and technology to protect sensitive data and Intellectual Property. Requirements imposed by regulatory authorities to protect certain types of information can vary by industry and can present additional challenges. A fundamental question asked by many organizations of all sizes is how critical IT assets can be protected and compliance requirements be met in a world where skilled security professionals are hard to find, budgets are scant, security technologies can be inherently complex and cyber-attacks are increasing at near exponential rates. To help organizations in this area EiQ provides ThreatVue, an add-on module to the SecureVue Continuous Security Intelligence platform, that provides automated monitoring of critical security controls.

The security controls monitoring add-on module helps organizations answer the question, “are my IT assets secure -- and what should I do to address areas of concern?” ThreatVue delivers answers to these questions via a closed-box, continuous-analysis approach that determines which IT assets meet (or don't meet) well accepted information security best practices. The solution monitors many security controls that align with recommendations from respected information security practitioners and organizations, including the critical security controls [1] from the Center for Strategic and International Studies (CSIS) and The SANS Institute. Within a single platform, the solution provides monitoring of critical security controls – and easily answers important questions such as what nodes, users and network activities are not aligned with security best practices, and provides remediation guidance on how to best address any issues.

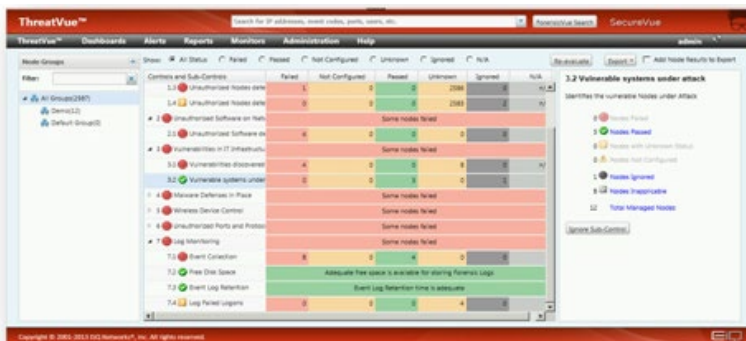

Continuous Security Intelligence™

### Key Benefits

- Gain continuous monitoring of well-accepted security controls and best practices
- Automate assessment of what systems are non-compliant with important security controls
- Receive guidance for remediating at-risk systems

SOCVue®  
Need security control monitoring but don't know where to start?

Make sure to check out SOCVue - a cost effective security monitoring service from EiQ for resource-constrained organizations at [www.socvue.com](http://www.socvue.com)

Security Control Monitoring User Interface –  
Continuous Control Monitoring from a Single Console

[1] <https://www.sans.org/critical-security-controls/>

## Key Features & Benefits

### Continuous Security Monitoring of Critical Security Controls [2]

Gain confidence through continuous monitoring of key security controls to ensure:

- Only authorized devices are operating on the network
- Only authorized software is being utilized
- Known vulnerabilities are addressed across the network
- Proper malware defenses are in place
- Only authorized network ports and protocols are operating on the network
- Only approved wireless devices are available on the network
- Proper log auditing is in place

### Centralized “Red Light / Green Light” Security Dashboard

Increase your organization’s information security awareness through an easy-to-use, single security console that provides a continuous view of what systems are non-compliant with important security controls

### Easy-to-Understand Remediation Guidance

Out-of-the-box security intelligence provides behind-the-scenes automation enabling organizations to proactively detect and remediate potential security problems

### Complements SecureVue

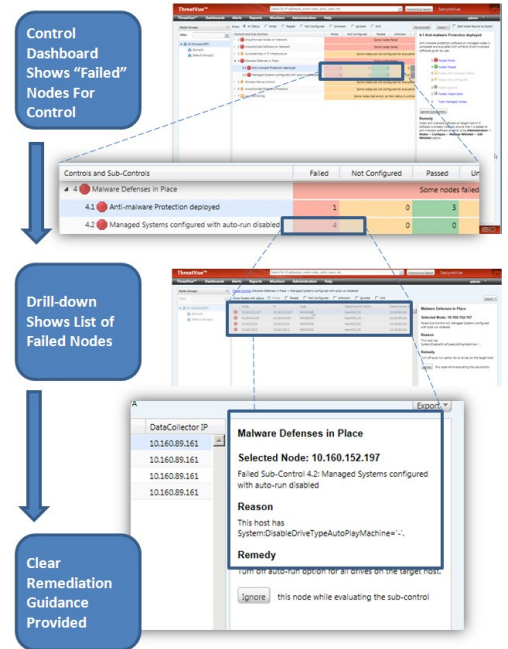

Battle-tested log management and security information and event management (SIEM) capabilities provides unrivaled automation in the detection of potentially harmful security

## About EiQ Networks

EiQ Networks, a pioneer in continuous security intelligence and compliance solutions and services, is transforming how organizations identify threats, mitigate risks and enable compliance. Our flagship solution, SecureVue®, a continuous security intelligence platform, helps organizations proactively detects incidents, implement security best practices, and receive timely and actionable intelligence along with remediation guidance. Through a single console, SecureVue enables a unified view of an organization’s entire IT infrastructure for continuous security monitoring, critical security control assessment, configuration auditing, and compliance automation. In addition, EiQ offers SOCVue, a security monitoring software as a service (SaaS) offering, provides 24x7 security operations to organizations that require security monitoring but lack resources or on-staff expertise to implement an effective security program.

[2] Supports SANS Critical Control Areas 1, 2, 4, 5, 7, 11, & 14
